The portrayal of food and the body in media. The increasing pervasiveness and importance of food and the body as cultural objects within the mass media has led to the growth of an interdisciplinary academic and applied body of scholarship, but no single discipline can claim comprehensive coverage. The journal this volume stems from was created as an attempt to show that the media are not isolated from society, but rather are an important agency in the reproduction and entrenchment of the status quo. To that end, its first section (Part I) considers a range of approaches to examining the media, including some of the most relevant

critical theories (such as discourse analysis and semiotics), while the remainder of the volume is dedicated to studies that examine how the media process and produce people and objects, notably notions of the body as it is seen and as it is used in everyday life. We conclude that it is a task as multi-disciplinary as it is essential, and we make some suggestions as to where researchers of the media, the social sciences, and the humanities might look next to become more deeply engaged in the process of culture (and less in the production of objects). We also anticipate that more research would emerge from the growing interest, for example, of those responsible for the production of children's programming on how they create messages about

food and the body to their targets (as well as to their audiences). Moreover, the marginal and/or overlooked topics of this volume have been chosen as being of abiding interest and as the areas from which future research can be expected to emerge. FILED NOT FOR PUBLICATION NOV 09 2012

According to the automatic transmission of a vehicle described in Japanese Laid-Open Patent Publication No. 2010-237175, when input of an accelerator pedal is changed from a neutral state or an idle-stop state to a travel state and when the change in the input is not correctly sensed, such as failure in a sensor that detects the input, an oversteer state occurs. In the event of an oversteer state, a control device of the automatic transmission performs specified control such as performing control in which a shift speed is shifted up, and torque is output to a drive wheel side from a hydraulic pump by way of a transmission mechanism, such as a gerotor gear, that is relatively rotated with respect to a transmission shaft.
