Top 13 Photoshop Elements Features for Programming Below is a list of some of the Photoshop Elements features that we will use to make graphical user interfaces for web pages and desktop apps. 1. The File List Window The file list window is a great tool that every programmer uses. It is a way of arranging your files in a neat way. What's New In Adobe Photoshop CS5?

Q: PHP scope issues I'm pretty new to PHP, and I have a question. In the very simple example below:

```
var; } } class B extends A { protected $var = 3; } ?>
```

 Can I then call the print function like so:

```
$b = new B(); $b->print();
```

 Will the variable \$var be changed? Thanks. A: Yep, you will see B's variable updated, since the this reference will be referring to the correct object. A: Yes, the method of one class is called by the object of another class by reference. If you do

```
$b->print()
```

 the print method of B will be called. Change the value of the property A::var inside the print method of B and you will see the change in the parent class A. This is done by referencing the object from the new class via

```
$this->var
```

 A: Yes, you can call the print method of the extended class through the object of the extended class. In your case :

```
$b = new B(); $b->print();
```

 This will call the print() method of B object because the \$this reference in A class refers to the B object. --- abstract: 'In this paper, we propose a self-supervised method to learn appearance transformations without correspondence data. Our method consists of two parts: a self-supervised framework that learns generic transformations, and a post-processing stage that learns the target transformation given the generic transformations. In the self-supervised framework, we train a deep network to predict a generic transformation field from a set of random transformations. In particular, we extend the affine transformation equation to non-affine transformation forms, such as identity and shearing. Then, we propose a tractable objective and solve the objective using stochastic gradient descent. Through experiments on multiple benchmarks, we show that the proposed method outperforms existing self-supervised methods.' author: - 'Eui-Yang Chung¹, Hyungjin Park¹, In So Kweon²
