AUTOCAD'S ORIGINS In 1982, when developing AutoCAD, Autodesk's business was overwhelmingly in architecture, engineering, and construction (AEC). At that time, AutoCAD was the only CAD program that ran on an internal graphics processor. A third-party graphics card was required to provide the graphics display, which was the only way the user could see what they were working on. In November 1982, Autodesk began a series of contests for AEC professionals to design a graphical user interface (GUI) for AutoCAD. Among the designs submitted by the professional users, two concepts stood out in particular: the "Hewlett Packard Graphical Function Symbols" and the "Saul Griffith Graphic Styling" interface. The HP Graphical Function Symbols included graphic icons and symbols in a menu-driven, point-and-click style. The "Saul Griffith Graphic Styling" interface consisted of toolbars and drop-down menus with icons. The HP Graphical Function Symbols idea was later used in the Microsoft Windows GUI. Autodesk used the HP Graphical Function Symbols concept for AutoCAD's first version, released in 1983. In the original AutoCAD release, the graphic display also consisted of a whiteboard (Canvas). Although it was possible to work entirely within the Canvas, more frequently the drawings would be saved and the drawings would be opened and saved again at a later time. AUTOCAD'S PRODUCT LIFE CYCLE The first version of AutoCAD was a DOS program, running in a 640×200 resolution on an 8-MHz 8088-based 8086 microprocessor, with a single-ported, shared graphics board. This setup was used to develop AutoCAD, which included everything except the graphics display and the available bitmap (i.e., line, polyline, and arc graphics) resolution. AutoCAD was shipped in a box that included a keyboard, a mouse, a laser printer, a single-ported graphics board, and the necessary manuals. The release of AutoCAD was funded in part by a US$350,000 loan from the National Science Foundation. The loan was part of an Autodesk's "Shared Technology" initiative to allow third parties to develop CAD systems on top of the mainframe-based AutoCAD technology

Initial Experience with Laparoscopic-Assisted Duodenal-Jejunal-Ileal Bypass (LA-DJI) for Morbid Obesity. Laparoscopic-assisted duodenal-jejunal-ileal bypass (LA-DJI) is a new technique with growing interest for the treatment of morbid obesity. We report the initial experience of our center in LA-DJI. We performed a prospective cohort of 18 LA-DJI procedures from 2012 to 2016. All patients underwent a bariatric procedure with LA-DJI. Preoperative and follow-up data were prospectively registered. The median operation time was 480 minutes. The median intraoperative blood loss was 250 mL. Median postoperative stay was 6 days. Median excess weight loss after 3 years was 50% (IQR 29-69%). Two patients experienced a serious adverse event during the hospital stay. Two patients had respiratory and circulatory failure and were transferred to intensive care. The rest of the patients were successfully managed conservatively. The median postoperative stay was 6 days (IQR 4-10). All patients had a gastroscopy for the assessment of pouch-enteric anastomosis function at 3, 6, 12 and 24 months, showing no significant complications. LA-DJI is a promising technique for the treatment of morbid obesity with a low risk of complication. Further clinical experience with LA-DJI is needed in a randomized study with a longer follow-up to assess its efficacy and safety.Follow American Idol Hi all! I posted my audition video below.
