Well before the first session of the convention, the highlight and the spotlight would often be on some celebrity — and they were put on stage well in advance of the opening ceremony. I would like to know what "well before" here means. It seems to me that "well before" should mean "a long time before", but this kind of construction often occurs in such contexts. In the above sentence, why does the first session of the convention not follow after the opening ceremony? A: I think "before" is being used to mean "in the past", and the sentence is saying that the beginning of the convention was held before the highlight and spotlight began. The highlight and spotlight are also in the past, so they would be behind them. Q: Is it possible to specify the G-Codes used in GPS receiver? I'm asking about this because I want to be able to generate custom G-Codes with a given pattern and I'm having trouble understanding what defines the real pattern or not. For example, I know that in GLONASS, if the sub-frame pattern is - - - - -, then I can generate the signal described here in the form of GNSS_SUBPATTERN_GLOASS_SUBFR
