Roblox is an online game platform that enables users to program their games and play games created by other users. Created by David Baszucki and Erik Cassel in 2004, Roblox has been used by more than 160 million people from more than 200 countries and territories to date. Roblox started out hosting games with a few friends and a single server running on their own computers, and only lasted a year. This changed when their server crashed and they had to rebuild it, and so they had a total of 2 servers to start with, and the site was finally launched publicly on May 16, 2006. At this point, Roblox had only 15 games and its application programming interface (API), i.e., the software library that developers could use to program games with, only had 5 functions. When Roblox was released, it gave people a place to live their dreams and express themselves, and now it has dozens of players and hundreds of games. As of today, there are over 12 million unique users logging in to play every month, and approximately 2.5 million programs have been created and coded with the API to date. Roblox is free to play and users can create a free account, however they can buy a premium membership that gives them more in-game currency. The site is designed for children aged 6-14, and uses a cartoon-like avatar and allows players to build and program within a virtual sandbox that resembles a building or room. Players explore their creations and meet other users by typing in their chat or through invitations from friends. The user experience is similar to an MMO but players can only control their avatar in-game, however they can have multiple avatars, which each have their own room and programming space. Roblox offers private chat, group chat, a virtual town with community buildings, and an online space where players can build their own creations. Roblox is played on a browser and does not require any other software. There is currently no version for the Xbox One or PlayStation 4, but the Xbox 360 version will be released as an indie game under the the name "Minecraft: Roblox" in the fall of 2019. The developers stated that this version will allow players to play with their creations on other devices. They also clarified that the current releases of the Xbox 360 and PlayStation 3 do not support this function. Games are downloaded or uploaded from a website hosted on the Roblox servers, and the player programs a game in a graphical editor
